

Analysis of Infringement of U.S. Patent No. 7,725,836 by Microchip Technology Incorporated

Plaintiffs Caddo Systems, Inc. and 511 Technologies, Inc. ("Caddo"), provide this final and exemplary infringement analysis with respect to infringement of U.S. Patent No. 7,725,836 entitled "ACTIVE PATH NAVIGATION SYSTEM" (the "'836 patent") by Microchip Technology Incorporated ("Microchip"). The following chart illustrates an exemplary analysis regarding infringement by Microchip's products and services ("'836 Accused Instrumentalities"):

- (i) web pages and content, including user interfaces such as a hierarchical information structure, to be interactively presented in browsers, including, without limitation, the web pages and content accessible via <https://www.microchip.com/> (as shown below) including <https://www.microchipdirect.com/> and maintained on servers located in and/or accessible from the United States under the control of Defendant that allow navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level;
- (ii) software, including, without limitation, software that allows web pages and content to be interactively presented in and/or served to browsers to facilitate navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level; and
- (iii) computer equipment, including, without limitation, computer equipment that stores, serves, hosts, supports, and/or runs any of the foregoing or that allows navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level, and any products, devices, systems, and/or components of systems with the same or substantially the same technical features and/or functionalities.

The analysis set forth below is based largely upon information from publicly available resources regarding the Accused Instrumentalities and Microchip's limited discovery production, as discovery in this matter has not yet been completed.

Unless otherwise noted, Caddo contends that Microchip directly infringes the '836 patent in violation of 35 U.S.C. § 271(a) by making, using, and/or selling, and/or offering to sell in the United States, and/or importing into the United States, without authority or license, the Accused Instrumentalities. The following exemplary analysis demonstrates that infringement. Unless otherwise noted,

Caddo further contends that the evidence below supports a finding of indirect infringement under 35 U.S.C. § 271(b) and 35 U.S.C. § 271(c) in conjunction with other evidence of liability.

Unless otherwise noted, Caddo believes and contends that each element of each claim asserted herein is literally met through Microchip's provision or importation of the Accused Instrumentalities. However, to the extent that Microchip attempts to allege that any asserted claim element is not literally met, Caddo believes and contends that such elements are met under the doctrine of equivalents. More specifically, in its investigation and analysis of the Accused Instrumentalities, Caddo did not identify any substantial differences between the elements of the patent claims and the corresponding features of the Accused Instrumentalities, as set forth herein. In each instance, the identified feature of the Accused Instrumentalities performs at least substantially the same function in substantially the same way to achieve substantially the same result as the corresponding claim element.

Caddo reserves the right to supplement and/or amend the positions taken in this infringement analysis, including with respect to literal infringement and infringement under the doctrine of equivalents, if and when warranted by further information obtained by Caddo, including but not limited to information adduced through information exchanges between the parties, fact discovery, expert discovery, and/or further analysis.

Plaintiffs' Final Infringement Contentions

Claim Chart re: U.S. Patent No. 7,725,836

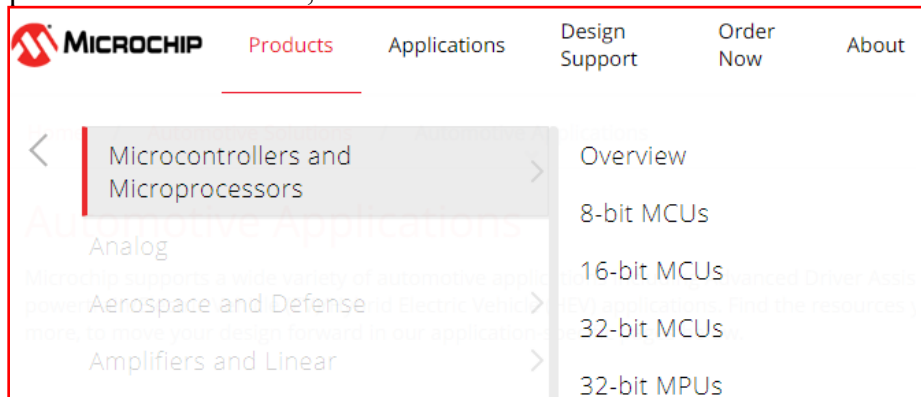

U.S. Patent No. 7,725,836 Claims	Infringement by the Microchip '836 Accused Instrumentalities
---	---

<p>1. A method for navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level, said method comprising the steps of:</p>	<p>The '836 Accused Instrumentalities ("Accused Instrumentalities") include:</p> <ul style="list-style-type: none"> (iv) web pages and content, including user interfaces such as a hierarchical information structure, to be interactively presented in browsers, including, without limitation, the web pages and content accessible via https://www.microchip.com/ and maintained on servers located in and/or accessible from the United States under the control of Defendant that allow navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level; (v) software, including, without limitation, software that allows web pages and content to be interactively presented in and/or served to browsers to facilitate navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level; and (vi) computer equipment, including, without limitation, computer equipment that stores, serves, hosts, supports, and/or runs any of the foregoing or that allows navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level, and any products, devices, systems, and/or components of systems with the same or substantially the same technical features and/or functionalities. <p><u>Direct Infringement</u> Microchip has directly infringed claims 1-5 and 7-8 of the '836 patent under 35 U.S.C. § 271(a) each time that it makes, uses, tests, and/or hosts in the United States the Accused Instrumentalities, or products, devices, systems, and/or components of systems, that practice the claimed methods described hereinbelow. Microchip also directly infringes each of the Asserted Claims under 35 U.S.C. § 271(a) each time that it imports the Accused Instrumentalities into the United States.</p> <p><u>Indirect Infringement</u> Microchip has induced and continues to induce infringement by others of claims 1-5 and 7-8 of the '836 patent under 35 U.S.C. § 271(b) by (a) providing the Accused Instrumentalities to third parties and intending them to use the Accused Instrumentalities; (b) advertising these Accused Instrumentalities through Microchip's own and through third party websites; (c) encouraging customers and other third parties to communicate directly with Microchip about the Accused Instrumentalities for purposes of technical assistance and repair as well as sales and marketing; (d) providing instructions as to how to use the Accused Instrumentalities in an infringing manner.</p>
--	--

Microchip has contributed to and continues to contribute to infringement by others of claims 1-5 and 7-8 of the '836 patent under 35 U.S.C. § 271(c) by providing the Accused Instrumentalities, including web pages and content, user interfaces (e.g., hierarchical collapsing menu structure, hierarchical information structure, information structure, and/or hierarchical menu structure), software, and/or computer equipment as identified above, in the United States without authority, Microchip contributes to the direct infringement of third-parties including end users of the Accused Instrumentalities.

To the extent that the preamble of Claim 1 is a limitation, the '836 Accused Instrumentalities provide, or support the provision of, a method as described below.

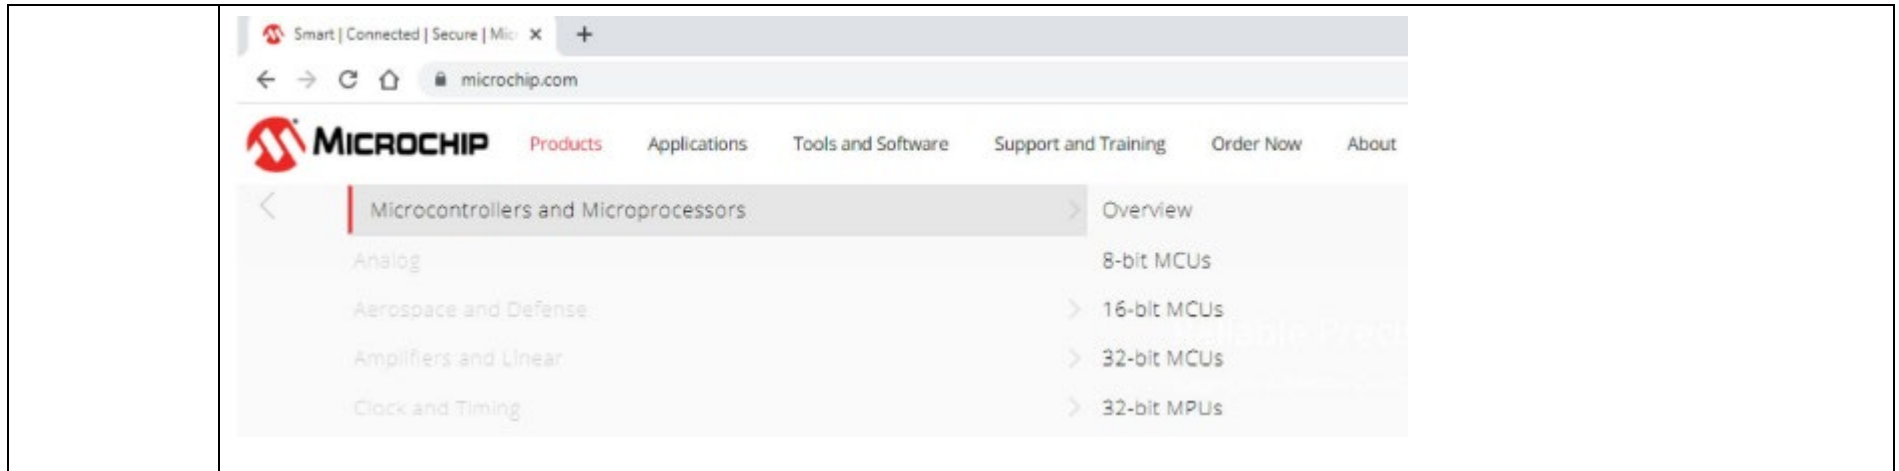

The '836 Accused Instrumentalities provide a method for navigating within a multi-level hierarchical information structure where each level in the menu contains plural items, each said item being at least one of a function, a pointer to a location, and a pointer to another level, as shown below:

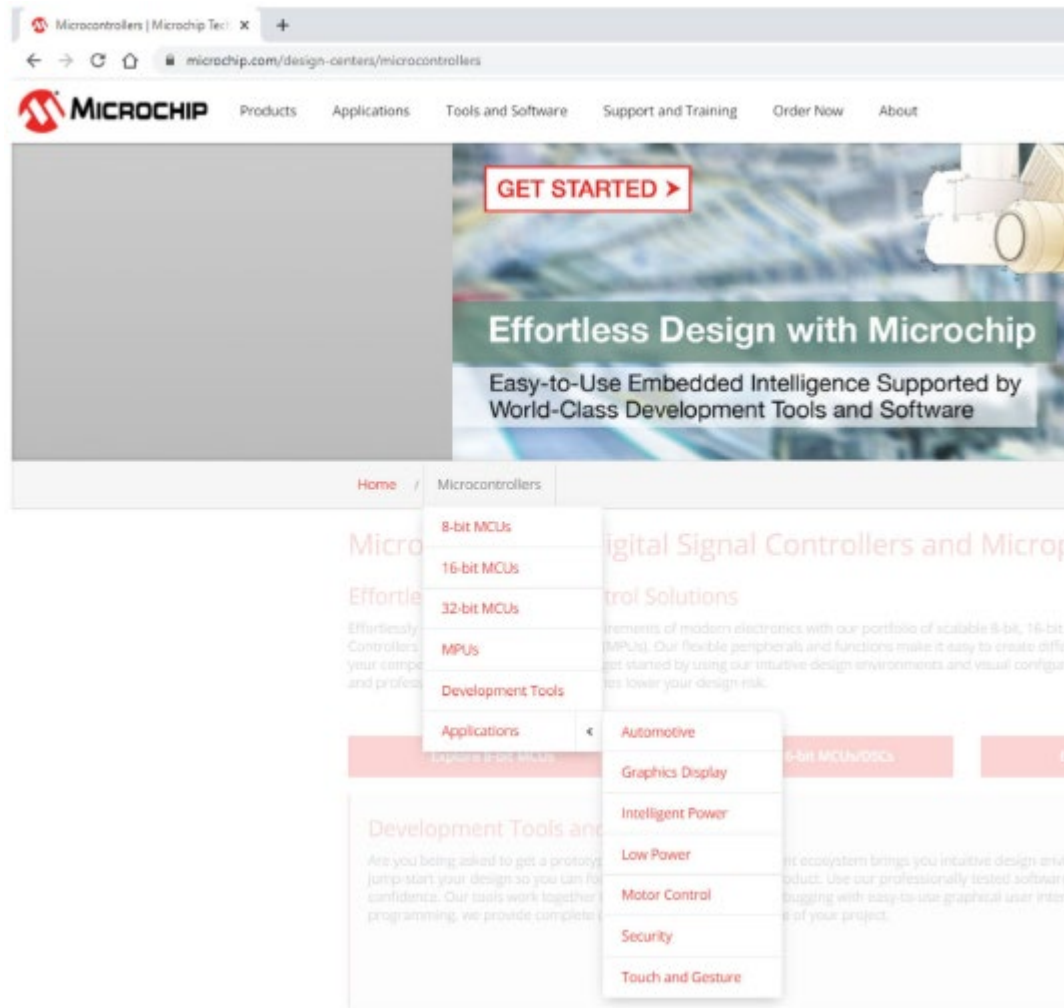

See, e.g., <https://www.microchip.com/design-centers/automotive-solutions/automotive-applications> (last visited Feb. 10, 2020) (annotated).

Claim Chart re: U.S. Patent No. 7,725,836

a given said active link enabling the user to browse items of the hierarchical information structure starting from the level corresponding with the given active link and items on hierarchically subordinate levels without affecting the Active Path.

A given said active link in the '836 Accused Instrumentalities enables the user to browse items of the hierarchical information structure starting from the level corresponding with the given active link and items on hierarchically subordinate levels without affecting the Active Path (the term "active path" has been construed by the Court (Dkt. 34) as a sequence of links dynamically created as a menu item is navigated).

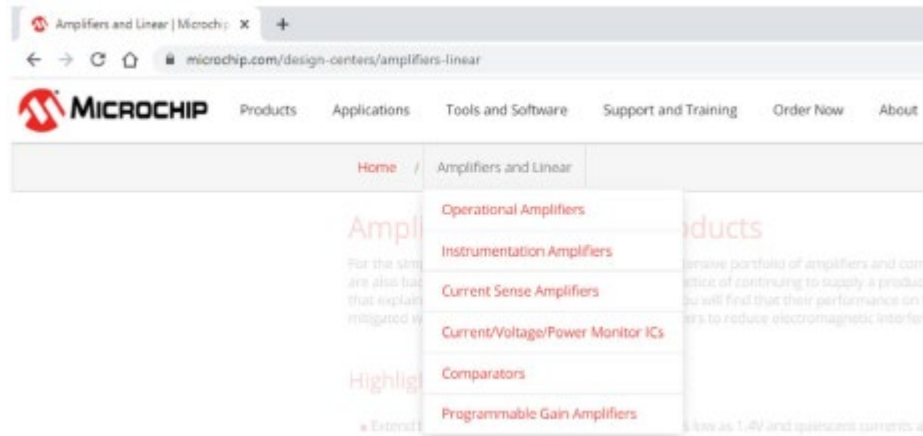

For example, in the '836 Accused Instrumentalities, a given said active link enables the user to browse items of the hierarchical information structure starting from the level corresponding with the given active link and items on hierarchically subordinate levels without affecting the sequence of links dynamically created as a menu item is navigated (*e.g.*, the '836 Accused Instrumentalities enable the user to browse items of the hierarchical information structure starting from "Amplifiers and Linear" and items on subordinate levels such as "Operational Amplifiers," "Instrumentation Amplifiers," "Current Sense Amplifiers," "Comparators," "Programmable Gain Amplifiers," and "DC Power Current Monitors" without affecting the sequence of links dynamically created as a menu item is navigated "Amplifiers and Linear—Comparators") as shown below:

dsPIC33CH Curiosity Development Board

Part Number: DM330028

The Curiosity High Pin Count (HPC) Development Board (DM164136) supports a wide variety of 8-bit MCUs. Curiosity Development Boards are cost-effective, fully-integrated MCU development platforms. The development board includes an integrated programmer/debugger and requires no additional hardware to get started.

Evaluate the dual-core dsPIC33CH family using this low-cost board with a configurable power supply load step transient generator. Or customize the board for your application using the two mikroBUS™ interfaces for adding a large variety of click Boards.

3. The method for navigating according to claim 1, wherein rolling over a selected active link triggers the display of sibling menu items on the hierarchically subordinate levels associated with said selected active link.

The '836 Accused Instrumentalities allow rolling over a selected active link triggers the display of sibling menu items on the hierarchically subordinate levels associated with said selected active link.

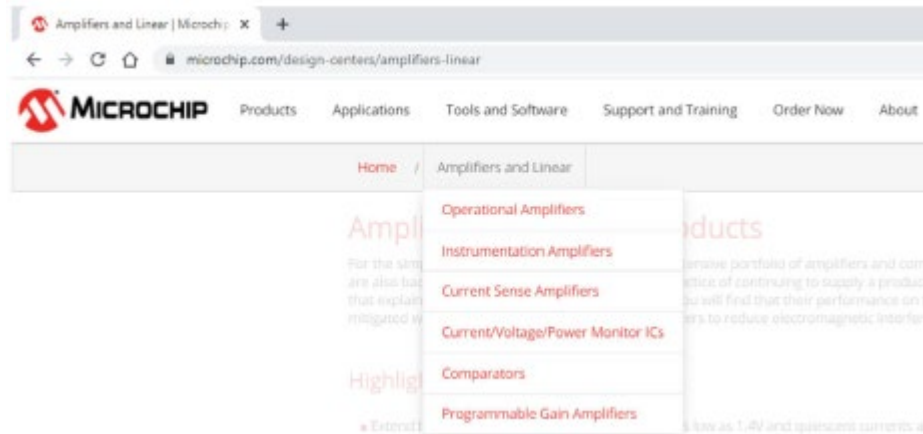

For example, in the '836 Accused Instrumentalities, rolling over a selected active link triggers the display of sibling menu items on the hierarchically subordinate levels associated with said selected active link (*e.g.*, the '836 Accused Instrumentalities allow rolling over the link "Amplifiers and Linear" to trigger the display of sibling menu items on the hierarchically subordinate levels associated with the selected active link "Amplifiers and Linear" such as "Operational Amplifiers," "Instrumentation Amplifiers," "Current Sense Amplifiers," "Comparators," "Programmable Gain Amplifiers," and "DC Power Current Monitors") as shown below:

See, *e.g.*, <https://www.microchip.com/design-centers/amplifiers-linear/comparators> (last visited Feb. 10, 2020).

As another example, rolling over a selected active link triggers the display of sibling menu items on the hierarchically subordinate levels associated with said selected active link (*e.g.*, the '836 Accused Instrumentalities allow rolling over the link

“Amplifiers and Linear” to trigger the display of sibling menu items on the hierarchically subordinate levels associated with the selected active link “Amplifiers and Linear” such as “Operational Amplifiers,” “Instrumentation Amplifiers,” “Current Sense Amplifiers,” “Comparators,” “Programmable Gain Amplifiers,” and “Current/Voltage/Power Monitor ICs”) as shown below:

See MCHP-CADDO_0000935.

As another example, in the '836 Accused Instrumentalities, rolling over a selected active link (e.g., rolling over and selecting “Microcontrollers and Microprocessors” in “Products / Microcontrollers and Microprocessors / 8-bit MCUs”) triggers the display of sibling menu items on the hierarchically subordinate levels associated with said selected active link (e.g., “Product Categories,” “Development Tools,” “Software Solutions,” “Application Design Centers,” and “Product Selections”) as shown below:

See <https://www.microchip.com/en-us/products/microcontrollers-and-microprocessors> (last accessed Jun. 8, 2021).

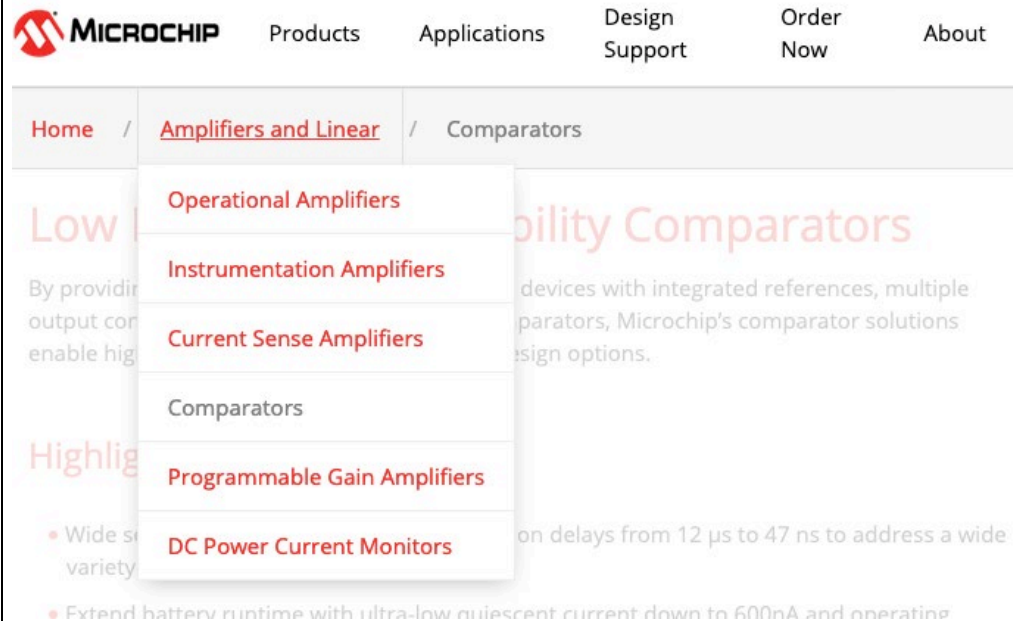

Plaintiffs' Final Infringement Contentions
Civil Action No.: 6:20-cv-245
Claim Chart re: U.S. Patent No. 7,725,836

	<p>To the extent Microchip contends that the '836 Accused Instrumentalities do not literally meet the limitation of rolling over a selected active link triggers the display of sibling menu items on the hierarchically subordinate levels associated with said selected active link, the limitation is met under the doctrine of equivalents by the '836 Accused Instrumentalities because it performs substantially the same function (displaying items such as "Product Categories," "Developments," "Software Solutions," "Application Design Centers," and "Product Selections") in substantially the same way (e.g., displaying the menu items on the hierarchically subordinate levels associated with the active link "Microcontrollers and Microprocessors") to produce substantially the same result (e.g., sibling menu items on the hierarchically subordinate levels associated with "Microcontrollers and Microprocessors" are displayed).</p>
--	---

4. The method for navigating according to claim 1, wherein selecting a given active link triggers the execution of a function associated with said given active link.

Selecting a given active link in the '836 Accused Instrumentalities triggers the execution of a function associated with said given active link.

For example, the '836 Accused Instrumentalities allow selecting a given active link triggers the execution of a function associated with said given active link (*e.g.*, selecting a given active link such as “Amplifiers and Linear” triggers the execution of a function, such as displaying sibling menus (*e.g.*, “Operational Amplifiers,” “Instrumentation Amplifiers,” “Current Sense Amplifiers,” “Comparators,” “Programmable Gain Amplifiers,” and “DC Power Current Monitors”) or directing user to certain content) as shown below:

See, *e.g.*, <https://www.microchip.com/design-centers/amplifiers-linear/comparators> (last visited Feb. 10, 2020).

As another example, the '836 Accused Instrumentalities allow selecting a given active link triggers the execution of a function associated with said given active link (*e.g.*, selecting a given active link such as “Amplifiers and Linear” triggers the execution

of a function, such as displaying sibling menus (e.g., “Operational Amplifiers,” “Instrumentation Amplifiers,” “Current Sense Amplifiers,” “Comparators,” “Programmable Gain Amplifiers,” and “Current/Voltage/Power Monitor ICs”) as shown below:

See MCHP-CADDO_0000935.

As another example, selecting a given active link triggering the execution of a function associated with said given active link (e.g., selecting a given active link such as “CAN” in the path “Products / Interface and Connectivity / CAN” triggers the execution of a function, such as displaying sibling menus (e.g., “MCU, DSC and MPU Products,” “Interface and Connectivity Products,” “Development Tools,” and “Documentation” associated with “CAN”) or directing user to certain content such as content under the link “CAN”), as shown below:

Claim Chart re: U.S. Patent No. 7,725,836

	<i>See, e.g.</i> , https://www.microchip.com/en-us/products/interface-and-connectivity/can (last accessed June 8, 2021).
--	--

5. The method for navigating according to claim 1, wherein selecting a given active link triggers display of information associated with said given active link.

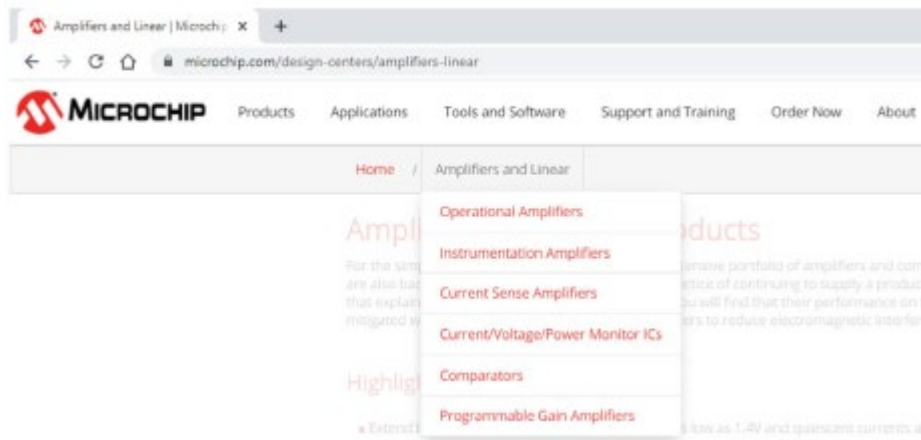

Selecting a given active link in the '836 Accused Instrumentalities triggers display of information associated with said given active link.

For example, the '836 Accused Instrumentalities allow selecting a given active link to trigger display of information associated with said given active link (*e.g.*, the '836 Accused Instrumentalities allow selecting the link "Amplifiers and Linear" to trigger display of information (*e.g.*, displaying "Operational Amplifiers," "Instrumentation Amplifiers," "Current Sense Amplifiers," "Comparators," "Programmable Gain Amplifiers," and "DC Power Current Monitors") associated with the link "Amplifiers and Linear") as shown below:

See, *e.g.*, <https://www.microchip.com/design-centers/amplifiers-linear/comparators> (last visited Feb. 10, 2020).

As another example, the '836 Accused Instrumentalities allow selecting a given active link to trigger display of information associated with said given active link (e.g., the '836 Accused Instrumentalities allow selecting the link "Amplifiers and Linear" to trigger display of information (e.g., displaying "Operational Amplifiers," "Instrumentation Amplifiers," "Current Sense Amplifiers," "Comparators," "Programmable Gain Amplifiers," and "Current/Voltage/Power Monitor ICs") associated with the link "Amplifiers and Linear") as shown below:

See MCHP-CADDO_0000935.

As another example, selecting a given active link triggers the display of information associated with said given active link (e.g., selecting a given active link such as "CAN" in the path "Products / Interface and Connectivity / CAN" triggers the display of the information associated with said given active link (e.g., "MCU, DSC and MPU Products," "Interface and Connectivity Products," "Development Tools," and "Documentation" associated with "CAN") or directing user to certain content such as content under the link "CAN"), as shown below:

7. The method according to claim 1, wherein the multi-level hierarchical information structure is a website.

The multi-level hierarchical information structure in the '836 Accused Instrumentalities is a website.

For example, the multi-level hierarchical information structure in the '836 Accused Instrumentalities is a website as shown below:

(See, e.g., <https://www.microchip.com/> (last visited Feb. 10, 2020)).

MICROCHIP Products Applications Tools and Software Support and Training Order Now About

Home / Amplifiers and Linear

Amplifiers and Linear Products

For the simplest to the most complex designs, our extensive portfolio of amplifiers and comparators enables you to develop low-risk solutions with mini products. Our products are also backed by our client-driven obsolescence practice of continuing to supply a product for as long as possible and while demand for the product exists. We provide technical support that explains how and why these devices work, and you will find that their performance on the bench matches the specifications in their data sheets. Designers can also mitigate with integrated features such as on-chip filters to reduce electromagnetic interference, integrated references and hardware enable pins that allow for easy integration.

Highlights

- Extend battery run time with operating voltages as low as 1.4V and quiescent currents as low as 450 nA
- Additional electromagnetic filtering on select devices provide additional protection in electrically harsh environments
- Small packages such as SOT-23 and leadless DFN are ideal for space constrained designs
- A wide operating temperature range of -40°C to +125°C provides a robust solution even at extreme temperatures

Operational Amplifiers (Op Amps)

Extensive portfolio ranging from cost-effective general-purpose amplifiers to precision amplifiers that minimize errors resulting from noisy environments

As another example, the '836 Accused Instrumentalities provide a method for navigating websites including a plurality of hierarchically organized web pages as shown below:

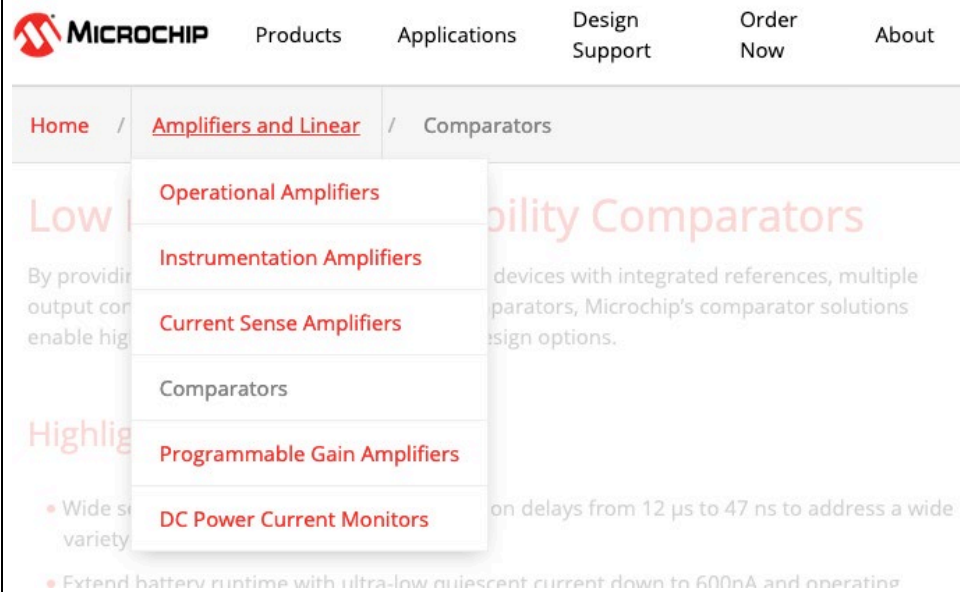

See <https://www.microchip.com> (last accessed Jun. 8, 2021).

providing a means for navigating the multi-level hierarchical website;

The '836 Accused Instrumentalities provide a means for navigating the multi-level hierarchical website. The Court has construed this term (Dkt.. 34) and determined it is governed by 35 U.S.C. § 112(6). The function of this term is navigating the multi-level hierarchical website, and the structure of this means-plus-function claim is a graphical user menu system.

Based on the Court's construction, the '836 Accused Instrumentalities provide a means for navigating the multi-level hierarchical website (*e.g.*, the '836 Accused Instrumentalities provide a graphical user menu system for navigating a multi-level hierarchical website), including through the graphical user menu system shown below:

See, e.g., <https://www.microchip.com/design-centers/amplifiers-linear/comparators> (last visited Feb. 10, 2020).

The screenshot displays the Microchip website's navigation and product categories. The top navigation bar includes the Microchip logo and links for Products, Solutions, Tools and Software, Support, Education, About, and Order Now. A search icon, user profile icon, and shopping cart icon are also present. The left sidebar menu lists various product categories, with 'Microcontrollers and Microprocessors' highlighted in green. The main content area features a 'Browse Microcontrollers and Microprocessors' section with a right-pointing arrow. Below this, there are two columns of product categories: '8-bit MCUs' and '32-bit MCUs'. The '8-bit MCUs' column lists PIC® MCUs, AVR® MCUs, 8051 MCUs, Peripherals, Functional Safety, and PIC18 to PIC24 Migration. The '32-bit MCUs' column lists 32-bit PIC Microcontrollers (MCUs), 32-bit SAM Microcontrollers (MCU), CEC 32-bit MCUs, Legacy 32-bit Microcontrollers (MCUs), and Applications, Reference Designs and Solutions.
